zzapp

Zzapp Larviciding App

Zzapp malaria introduces innovative technologies to the world of malaria intervention, that help overcome operational challenges.

The biggest challenge in vector control is to locate and treat 100% of water sources in a specified area and remember to spray each one of them once a week.

Our map-based larviciding app is a smart solution that will help workers and managers achieve 100% coverage.

The app assigns the worker sections and routes to follow, and keeps track of the worker's progress. It then shows the worker a clear map of his area, enables him to photograph and flag each water source, and alerts him to unscanned or untreated puddles. The app collects all the relevant data and transfers it automatically to the management Dashboard.

- Clear interactive map and satellite image
- Operates without constant connectivity
- Seamless data transfer to Dashboard
- Follows WHO's guidelines
